

SEMESTER 6

**ELECTRICAL & ELECTRONICS
ENGINEERING**

SEMESTER S6

CONTROL SYSTEMS

Course Code	PCEET601	CIE Marks	40
Teaching Hours/Week (L: T:P: R)	3:0:0:0	ESE Marks	60
Credits	3	Exam Hours	2 Hrs. 30 Min.
Prerequisites (if any)	PCEET503	Course Type	Theory

Course Objectives:

1. To introduce various classical tools for analysis of linear control system in time and frequency domain.
2. To provide a fundamental knowledge of modern control system.

SYLLABUS

Module No.	Syllabus Description	Contact Hours
1	Introduction to Control Systems and its time domain analysis <i>Review of Open loop and Closed loop control systems; Automatic control systems; Necessity and significance. (Not for evaluation)</i> <i>(1 hour)</i> <i>Time domain analysis of control systems: Impulse and Step responses of first and second order systems - Pole dominance for higher order systems. Time domain specifications. (4 hours)</i> <i>Error analysis: Steady state error analysis and static error constants. (2 hours)</i>	7
2	Root Locus Analysis and Controllers: <i>Root locus technique: Construction of Root locus - stability analysis- effect of addition of poles and zeros; Effect of positive feedback systems on Root locus. (5 hours)</i> <i>Controller design: Types of controllers and their control action-</i>	7

	proportional (P), integral (I), derivative (D), PID control. PID tuning using Ziegler-Nichols method. (2 hours)	
3	<p>Frequency domain analysis:</p> <p><i>Bode Plot:</i> Construction, Concept of gain margin and phase margin-stability analysis. (4 hours)</p> <p>Frequency domain specifications - correlation between time domain and frequency domain responses (Resonant peak and resonant frequency).</p> <p>Introduction to compensators. (Concept only). (2 hours)</p> <p>Polar plot: Gain margin and phase margin, Stability analysis. (2 hours)</p> <p>Nyquist stability criterion. Concept of Nichols Chart. (3 hours)</p>	11
4	<p>State space representation of systems:</p> <p><i>Introduction to state-space modelling:</i> State variables, state equations. State variable representation of electrical systems. (2 hours)</p> <p><i>Relationship between State space and Transfer function models:</i> Derivation of transfer functions from state equations. Controllable, Observable and Diagonal/Jordan canonical forms.</p> <p>Introduction to similarity transformations (concept only). (4 hours)</p> <p><i>Solution of time invariant systems:</i> Solution of time response of autonomous systems and forced systems. State transition matrix - computation using Method of Laplace Transform and Cayley Hamilton theorem. (4 hours)</p> <p><i>Controllability & Observability:</i> Definition, Kalman's test. (1 hour)</p>	11

Course Assessment Method
(CIE: 40 marks, ESE: 60 marks)

Continuous Internal Evaluation Marks (CIE):

Attendance	Assignment/ Microproject	Internal Examination-1 (Written)	Internal Examination- 2 (Written)	Total
5	15	10	10	40

End Semester Examination Marks (ESE)

In Part A, all questions need to be answered and in Part B, each student can choose any one full question out of two questions

Part A	Part B	Total
<ul style="list-style-type: none"> 2 Questions from each module. Total of 8 Questions, each carrying 3 marks <p>(8x3 =24marks)</p>	<ul style="list-style-type: none"> Each question carries 9 marks. Two questions will be given from each module, out of which 1 question should be answered. Each question can have a maximum of 3 sub divisions. <p>(4x9 = 36 marks)</p>	60

Course Outcomes (COs)

At the end of the course students should be able to:

Course Outcome		Bloom's Knowledge Level (KL)
CO1	Analyse the time domain responses of linear systems and predict and diagnose transient response parameters of the system for standard input functions.	K2
CO2	Analyse dynamics systems for their performance and stability using Root locus	K3
CO3	Apply frequency domain tools to analyse the performance of linear dynamic systems	K3
CO4	Represent and analyse dynamic systems using state-space.	K2

Note: K1- Remember, K2- Understand, K3- Apply, K4- Analyse, K5- Evaluate, K6- Create

CO-PO Mapping Table (Mapping of Course Outcomes to Program Outcomes)

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	3	2	1	2	1	3	3	3			3	2
CO2	3	3	2	2	2	3	3	3			3	2
CO3	3	3	2	2	2	3	3	3			3	2
CO4	3	2	1	2	1	3	3	3			3	2

Note: 1: Slight (Low), 2: Moderate (Medium), 3: Substantial (High), -: No Correlation

Text Books

2	Control Systems Engineering	Norman S. Nise	Wiley	5th edition, 2009
3	Control Systems Engineering	I. J. Nagrath, M. Gopal	New Age	5th edition, 2009

Reference Books				
Sl. No	Title of the Book	Name of the Author/s	Name of the Publisher	Edition and Year
1	Automatic Control Systems,	Kuo B. C.	Prentice Hall of India	9th edition, 2014
2	Control Systems Principles and Design	Gopal M.	Tata McGraw Hill.	4th edition, 2012
3	Modern Control Systems	Dorf R. C., Bishop R. H	Pearson Education India	12th edition, 2013

SEMESTER - S6
ELECTRICAL SYSTEM DESIGN AND ESTIMATION

Course Code	PCEET602	CIE Marks	40
Teaching Hours/Week (L: T:P: R)	3:0:0:0	ESE Marks	60
Credits	3	Exam Hours	2 Hrs. 30 Min.
Prerequisites (if any)	None/ (Course code)	Course Type	Theory

Course Objectives:

1. To create awareness regarding electrical symbols, Indian Standard codes, Indian Electricity acts and NEC norms
2. To enable students to design the various electrical installations with necessary precautions to ensure life safety, risk prevention and continuous operation of the system
3. To help in energy-efficient electrical design in compliance with codes and regulations.

SYLLABUS

Module No.	Syllabus Description	Contact Hours
1	Awareness on IS Codes - IS 732, IS 3043, IS 2026- IS 3646-part 1 & 2 - IS 5216 part 1 & 2 Electricity supply code-2014, IE Act 1910, 2003, NEC LT system wiring components, selection of cables, wires, switches, distribution box, metering system, basics of star rating and labelling Principle of operation of Fuse, MCB, MCCB, ELCB/RCCB, isolator.	7
2	General requirements for electrical installations- Residential/ Commercial/ High rise building, method of load survey for electrical installation, Diversity factor Sizing and selection of wires, MSB, SSB, DB and protection devices. Design steps in electrical wiring, material estimation and development of single line diagrams. Electrical CAD (optional). Pre-commissioning test applicable to domestic installation	12

	<p>Lighting design calculations - Definitions of Luminous flux, Luminous intensity, Illuminance. Illumination calculation, factors affecting Coefficients of Utilisation (CoU) - Light Loss Factor (LLF).</p> <p>Design and Estimation the quantity of material required in Electrical Installation for - Small residential building/Flat/Factory (Micro-Project)</p>	
3	<p>Indoor and Outdoor substation- selection of transformer, switch gears and protective devices, Procedure for HT connection, design and estimation the quantity of material required for substations, Pre-commissioning tests for transformers</p> <p>Industrial loads, selection of starters, cable and switchgears, Power factor improvement – kVAR calculation, correction methods</p> <p>Design of MSB & SSB including Motor Control Centre (MCC) - Selection of bus bars (CU & Al) and Switchgears</p> <p>Specifications of LT Breakers and other LT panel components (Basics only)</p> <p>Selection of industrial UG cables - Calculation of ampacity, voltage drop, short circuit withstand capacity</p>	10
4	<p>Standby DG Systems with AMF panel – Essential protections. UPS system and its design for residential application</p> <p>Selection and installation of elevators and lifts</p> <p>Earthing and Soil Resistivity calculation– Earth electrodes. Methods of earthing - Plate earthing - Pipe earthing - Rod earthing. Methods of improving earth resistance - Size of earth continuity conductor</p> <p>Substation earthing and design (Theory only), substation lightning protection (Theory only)</p> <p>Solar PV Power generation – Design and installation of standalone and grid interactive Solar PV system -Smart meter/Net meter</p>	7

Course Assessment Method
(CIE: 40 marks, ESE: 60 marks)

Continuous Internal Evaluation Marks (CIE):

Attendance	Assignment/ Microproject	Internal Examination-1 (Written)	Internal Examination- 2 (Written)	Total
5	15	10	10	40

End Semester Examination Marks (ESE)

In Part A, all questions need to be answered and in Part B, each student can choose any one full question out of two questions

Part A	Part B	Total
<ul style="list-style-type: none"> 2 Questions from each module. Total of 8 Questions, each carrying 3 marks <p style="text-align: center;">(8x3 =24marks)</p>	<ul style="list-style-type: none"> Each question carries 9 marks. Two questions will be given from each module, out of which 1 question should be answered. Each question can have a maximum of 3 sub divisions. <p style="text-align: center;">(4x9 = 36 marks)</p>	60

Course Outcomes (COs)

At the end of the course students should be able to:

Course Outcome		Bloom's Knowledge Level (KL)
CO1	Understand the Indian standards and code of practice for efficient and effective energy usage with various electrical system design components.	K2
CO2	Design electrical wiring for residential and commercial consumers as per IS codes and NEC and integration of PV systems	K3
CO3	Design electrical installation for industrial consumers and high rise buildings.	K3
CO4	Analyse electrical system conditioning equipment and power backups.	K4
CO5	Design various earthing methods and protection	K3

Note: K1- Remember, K2- Understand, K3- Apply, K4- Analyse, K5- Evaluate, K6- Create

CO-PO Mapping Table (Mapping of Course Outcomes to Program Outcomes)

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	3	2	1			2		2	2			2

1	National Lighting Code 2010, Bureau of Indian Standards.			
2	National Building Code of INDIA 2016 - Bureau of Indian Standards.			
3	A Course in Electrical Installation Estimating and Costing.	J. B. Gupta	S.K. Kataria & Sons	Reprint 2013 edition (2013)
4	Electrical estimating and costing	S. Singh, and R. D. Singh	Dhanpat Rai and Co.	1997

SEMESTER S6
DIGITAL PROTECTION OF POWER SYSTEMS

Course Code	PEEET631	CIE Marks	40
Teaching Hours/Week (L: T:P: R)	3:0:0:0	ESE Marks	60
Credits	3	Exam Hours	2 Hrs. 30 Min.
Prerequisites (if any)	PCEET501, PBEET604	Course Type	Theory

Course Objectives:

1. To deliver fundamental concepts to design various electronic circuits to implement various relaying functions.

SYLLABUS

Module No.	Syllabus Description	Contact Hours
1	<p>Introduction: Need for protective systems, Zones of protection, Current transformers and voltage transformers (Electromagnetic and Capacitive voltage transformers), Principle of operation of magneto optic CT/ PT, effect on relaying philosophy.</p> <p>Relays: Over current relays - time-current characteristics of over current relays: definite time over current relays, inverse Definite Minimum time - directional over current relays, current setting and time setting - Numerical Problems - Differential relays: Operating and restraining characteristics, types of differential relays, Distance relays: impedance relays, reactance relays, mho relays (basic principles and characteristics only)</p>	9
2	<p>Protection of Transmission Lines: Schemes of distance protection, Differential line protection, Phase comparison line protection.</p> <p>Protection of Bus-bar, Transformer and Generator & Motor: Types of faults, differential protection: High impedance and low impedance differential protection schemes, harmonic restraint relay, Restricted Earth Fault Protection, frame leakage protection, stator and rotor protection against various types of faults.</p>	9

3	<p>Digital (Numerical) Relays: Basic Components of numerical Relays with block diagram, Processing Unit, Human machine Interface, Principle of operation, Comparison of numerical relays with electromechanical and static relays, Advantages of numerical relays - communication in protective relays (IEC 61850), Information handling with substation automation system (SAS) Signal Conditioning Subsystems: Surge Protection Circuits, Anti-aliasing filter, Conversion Subsystem, The Sampling Theorem, aliasing, Sample and Hold Circuit, Concept of analog to digital and digital to analog conversion, Idea of sliding window concept, Fourier, Discrete and fast Fourier transforms</p>	9
4	<p>Signal processing techniques: Sinusoidal wave based algorithms, Fourier Analysis based algorithms (half cycle and full cycle), Least squares based algorithm. Digital filters – Fundamentals of Infinite Impulse Response Filters, Finite Impulse Response filters, Filters with sine and cosine windows.</p> <p>Wide Area Protection and Measurement: Phasor Measurement Units, concept of synchronized sampling, Definition of wide-area protection, Architectures of wide-area protection, concept of Adaptive relaying, advantages of adaptive relaying and its application, Adaptive Differential protective scheme.</p>	9

Course Assessment Method
(CIE: 40 marks, ESE: 60 marks)

Continuous Internal Evaluation Marks (CIE):

Attendance	Assignment/ Microproject	Internal Examination-1 (Written)	Internal Examination- 2 (Written)	Total
5	15	10	10	40

End Semester Examination Marks (ESE)

In Part A, all questions need to be answered and in Part B, each student can choose any one full question out of two questions

Part A	Part B	Total
<ul style="list-style-type: none">2 Questions from each module.Total of 8 Questions, each carrying 3 marks <p>(8x3 =24marks)</p>	<ul style="list-style-type: none">Each question carries 9 marks.Two questions will be given from each module, out of which 1 question should be answered.Each question can have a maximum of 3 sub divisions. <p>(4x9 = 36 marks)</p>	60

Course Outcomes (COs)

At the end of the course students should be able to:

Course Outcome		Bloom's Knowledge Level (KL)
CO1	Identify the relay protection scheme suitable for overcurrent, differential and distance protection.	K3
CO2	Develop the protection scheme for bus bars, transformers, generators, motors and distribution systems using appropriate protective relays	K3
CO3	Illustrate the operation of a numerical relay.	K2
CO4	Explain signal processing methods and algorithms in digital protection	K2
CO5	Infer emerging protection schemes in power systems	K3

Note: K1- Remember, K2- Understand, K3- Apply, K4- Analyse, K5- Evaluate, K6- Create

CO-PO Mapping Table (Mapping of Course Outcomes to Program Outcomes)

SEMESTER S6 OPERATING SYSTEMS

Course Code	PEEET632	CIE Marks	40
Teaching Hours/Week (L: T:P: R)	3:0:0:0	ESE Marks	60
Credits	3	Exam Hours	2 Hrs. 30 Mins.
Prerequisites (if any)	PEEET526	Course Type	PE - Theory

Course objectives:

1. To understand the overall working of computer system, trade-offs between performance and functionality and the division of jobs between hardware and software.
2. Introduces the concepts of memory management, device management, process management, file management and security & protection mechanisms available in an operating system.
3. To understand the fundamentals about any operating system design

SYLLABUS

Module No.	Syllabus Description	Contact Hours
1	Introduction: Operating system overview – Functions, Boot Process Processes - Process states, Process control block, threads, scheduling, Operations on processes - process creation and termination Inter-process communication - shared memory systems, Message passing systems.	8
2	Process Scheduling – Basic concepts- Scheduling criteria -scheduling algorithms- First come First Served, Shortest Job Firs, Priority scheduling, Round robin scheduling Process synchronization- Race conditions – Critical section problem – Peterson’s solution, Synchronization hardware, Mutex Locks, Semaphores, Monitors – Synchronization problems - Producer Consumer, Dining Philosophers and Readers-Writers.	10
3	Deadlocks: Necessary conditions, Resource allocation graphs, Deadlock prevention, Deadlock avoidance – Banker’s algorithms, Deadlock detection, Recovery from deadlock. Memory Management: Concept of address spaces, Swapping, Contiguous memory allocation, fixed and variable partitions, Segmentation, Paging. Virtual memory, Demand paging, Page replacement algorithms.	10

4	File System: File concept - Attributes, Operations, types, structure – Access methods, Protection. File-system implementation, Directory implementation. Allocation methods. Storage Management: Magnetic disks, Solid-state disks, Disk Structure, Disk scheduling, Disk formatting.	8
---	---	---

Course Assessment Method
(CIE: -40 Marks, ESE: 60 Marks)

Continuous Internal Evaluation Marks (CIE):

<i>Attendance</i>	<i>Assignment/ Micro project</i>	<i>Internal Ex-1</i>	<i>Internal Ex-2</i>	<i>Total</i>
5	15	10	10	40

End Semester Examination Marks (ESE):

In Part A, all questions need to be answered and in Part B, each student can choose any one full question out of two questions

Part A	Part B	Total
<ul style="list-style-type: none"> 2 Questions from each module. Total of 8 Questions, each carrying 3 marks <p>(8x3 =24marks)</p>	<p>2 questions will be given from each module, out of which 1 question should be answered. Each question can have a maximum of 3 sub divisions. Each question carries 9 marks.</p> <p>(4x9 = 36 marks)</p>	<p>60</p>

Course Outcomes (COs)

At the end of the course the student will be able to:

Course Outcome		Bloom's Knowledge Level (KL)
CO1	Explain the relevance, structure and functions of Operating Systems in computing devices.	K2
CO2	Illustrate the concepts of process management and process scheduling mechanisms employed in Operating Systems.	K2
CO3	Explain process synchronization in Operating Systems and illustrate process synchronization mechanisms using Mutex Locks, Semaphores and Monitors	K2
CO4	Explain any one method for detection, prevention, avoidance and recovery for managing deadlocks in Operating Systems.	K2
CO5	Explain the memory management algorithms in Operating Systems.	K2
CO6	Explain the security aspects and algorithms for file and storage management in Operating Systems.	K2

K1- Remember, K2- Understand, K3- Apply, K4- Analyse, K5- Evaluate, K6- Create

SEMESTER S6
HIGH VOLTAGE ENGINEERING

Course Code	PEEET633	CIE Marks	40
Teaching Hours/Week (L: T:P: R)	3:0:0:0	ESE Marks	60
Credits	3	Exam Hours	2 Hrs. 30 Min.
Prerequisites (if any)	NIL	Course Type	Theory

Course Objectives:

1. To introduce basic terms and techniques applicable to high voltage ac and dc networks.
2. To learn about generation of different type of High voltage waveforms, their measurement and analysis.

SYLLABUS

Module No.	Syllabus Description	Contact Hours
1	<p>Generation of High DC and AC Voltages- half-wave rectifier circuit- Cockroft-Walton voltage multiplier circuit- Electrostatic generator- Generation of high AC voltages-Cascaded Transformers- Series resonant circuit.</p> <p>Generation of Impulse Voltages and Currents- Impulse voltage- Impulse generator circuits- Multistage impulse generator circuit- Construction of impulse generator- Triggering of impulse generator- Impulse current generation.</p>	9
2	<p>High Voltage Measurement Techniques -Measuring Spark Gaps - Sphere-to-sphere Spark Gap -Rod-to-rod Spark Gap - Electrostatic Voltmeter- Field Sensors - Electrically Short Sensors, Electrically Long Sensors, Potential-free Probes, Generator-mode Sensors, Electro- optical and Magneto-optical Field Sensors - Voltage Dividers - Instrument Transformers - Measurements of R.M.S. Value, Peak Value and Harmonics - Current Measurement</p> <p>Dielectric measurements- Dissipation Factor and Capacitance, Insulation Resistance, Conductivity, Dielectric System Response-Partial discharge measuring technique- Requirements on a partial discharge measuring</p>	9

	<p>system - Measuring systems for apparent charge – Partial discharge measurements on high-voltage transformers, high-voltage cables, high-voltage gas-insulated substations.</p> <p>.</p>	
3	<p>Classification of Voltages and Overvoltages-Origin of Overvoltages – Representative Overvoltages- Performance Criterion –Withstand voltage. Insulation Coordination Procedure- Determination of Representative Voltages and Overvoltages-Continuous Power Frequency Voltage, Temporary Overvoltages, Slow-Front Overvoltages, Fast-Front Overvoltages</p> <p>Determination of Coordination Withstand Voltage (U_{cw})-Deterministic Approach, Statistical Approach: Risk of Failure - Determination of Required Withstand Voltage (U_{rw})-Altitude Correction Factor, Safety Factor (K_s)- Selection of Standard Withstand Voltage (U_w)- Surge Arresters- Rated Voltage- Discharge Current- Impulse Current Tests- Residual Voltages- Arrester Durability Requirements.</p>	9
4	<p>High voltage Testing of insulators, bushings, isolators, circuit breakers, transformers, surge diverters, cables.</p> <p>Insulation Systems for AC Voltages -Cables, bushings and transformers- Insulation Systems for DC Voltages- Capacitors, HVDC bushings and Cables-Insulation Systems for Impulse Voltages -Electrical Stress and Strength -Energy Storage -Impulse Capacitors (Energy Storage or Surge Capacitors)</p> <p>Lightning Protection- Light and Laser Technology- X-ray Technology- Electrostatic Particle Precipitation, Ionization- Spark plugs.</p>	9

Course Assessment Method

(CIE: 40 marks, ESE: 60 marks)

Continuous Internal Evaluation Marks (CIE):

Attendance	Assignment/ Microproject	Internal Examination-1 (Written)	Internal Examination- 2 (Written)	Total
5	15	10	10	40

SEMESTER S6
INTERNET OF THINGS

Course Code	PEEET634	CIE Marks	40
Teaching Hours/Week (L: T:P: R)	3:0:0:0	ESE Marks	60
Credits	3	Exam Hours	2 Hrs. 30 Min.
Prerequisites (if any)	Nil	Course Type	Theory

Course Objectives:

1. This course aims to introduce IOT fundamentals.

SYLLABUS

Module No.	Syllabus Description	Contact Hours
1	Introduction to IoT technology: Definitions of IoT, Characteristics of IoT devices – power, computational constraints, IoT Architectural view – Middleware based architecture, Service oriented architecture, M2M Communication and IoT, Typical application areas of IoT technology (case studies of at least four domains) - Energy management and Smart grid, IoT for Home, Cities, Environment monitoring, Agriculture, Supply chain and customer monitoring	9
2	Components of IoT technology: Identification/Addressing - Electronic Product Codes, RFID, ubiquitous code, IPv4, IPv6. Sensors and Actuators*. IoT Hardware**, IoT Software – overview of Operating systems, Firmware, Middle ware, Application software used in IoT. Connectivity for IoT devices – characteristics.	9
3	Communication technologies for IoT : Zigbee - key features, architecture, limitations, Bluetooth technology - bluetooth stack, piconet, scatternet, limitations, Bluetooth Low Energy (key features, architecture, limitations), Wifi (IEEE 802.11) technology – key features, limitations, Cellular technology – GSM, 3G, 4GLTE (overview), features, limitations, LoRa technology – features, LoRaWAN architecture, 6LoWPAN – features, protocol stack, Narrow Band (NB- IoT) – features, applications, Sigfox – features, applications	9

4	IoT Data Management : Storage technologies for IoT hardware – Volatile, Non-volatile, Embedded (MTP/OTP), external flash (NAND/NOR), DRAM, eflash, UFS, eMMC (overview of technologies). Cloud and IoT, Cloud computing – architecture, advantages of cloud computing, Software as a Service (SaaS), Platform as a Service (PaaS), Infrastructure as a Service (IaaS). Case study of commercial cloud computing platforms like - Microsoft Azure IoT Suite, Google Cloud's IoT Platform, IBM Watson IoT Platform. IoT analytics	9

Course Outcomes (COs)

At the end of the course students should be able to:

Course Outcome		Bloom's Knowledge Level (KL)
CO1	Explain in a concise manner the architecture of IoT	K2
CO2	Identify various hardware and software components used in IoT	K3
CO3	Discuss the various communication technologies and interfaces in IoT	K2
CO4	Describe the usage of modern technologies like cloud computing for data management in IoT	K2

Note: K1- Remember, K2- Understand, K3- Apply, K4- Analyse, K5- Evaluate, K6- Create
CO-PO Mapping Table (Mapping of Course Outcomes to Program Outcomes)

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	3	2	2	2								2
CO2	3	2	2	2								2
CO3	3	2	2	1								2
CO4	3	2	2	1								2

Note: 1: Slight (Low), 2: Moderate (Medium), 3: Substantial (High), -: No Correlation

SEMESTER S6
DIGITAL SIGNAL PROCESSING

Course Code	PEEET636	CIE Marks	40
Teaching Hours/Week (L: T:P: R)	3:0:0:0	ESE Marks	60
Credits	3	Exam Hours	2 Hrs. 30 Min.
Prerequisites (if any)	PCEET603/ PEEOT522	Course Type	Theory

Course Objectives:

1. To provide a thorough understanding of the realisation, design and analysis of DSP systems

SYLLABUS

Module No.	Syllabus Description	Contact Hours
1	<p>Introduction to DSP and Discrete Fourier transform: Basic elements of DSP system. Advantages and applications. Review of Discrete-Time Fourier transform (DTFT) and its properties. Frequency domain sampling, Discrete Fourier transform (DFT) - DFT pair, properties of DFT, frequency response analysis of signals using the DFT, circular convolution using DFT, linear filtering based on DFT. Fast Fourier transform (FFT): Introduction, Radix -2 decimation in time FFT algorithm, Radix-2 decimation in frequency algorithm, IDFT using FFT algorithm.</p>	10
2	<p>Realisation of Filters: Introduction to IIR and FIR systems. Structures for IIR Systems: Direct-Form Structures, Cascade-Form Structures, Parallel-Form Structures, Lattice Structures for IIR Systems. Structures for FIR Systems: Direct-Form Structure, Cascade-Form Structures, Lattice Structure. Linear Phase FIR filters. Signal Flow Graphs and Transposed Structures.</p>	7
3	<p>Design of Digital Filters: General considerations, Causality and its implications, characteristics of practical frequency selective filters.</p>	10

	<p>IIR filter design: Discrete time IIR filter from analog filter (Butterworth), IIR filter (LPF, HPF, BPF, BRF) design by Impulse Invariance, Bilinear transformation.</p> <p>FIR filter design: Structures of FIR filter, Linear phase FIR filter</p> <p>Filter design using windowing techniques (Rectangular, Hanning, Hamming), frequency sampling Techniques.</p>	
4	<p>Finite Word Length effects in Digital Filters:</p> <p>Fixed point and floating-point number representations, Comparison, Truncation and Rounding errors.</p> <p>Quantization noise, Derivation for quantization noise power, coefficient quantization error, Product quantization error.</p> <p>Overflow error, Round-off noise power. Limit cycle oscillations due to product round-off and overflow errors, signal scaling.</p> <p>Introduction to TMS320 Family:</p> <p>Architecture, C24x CPU and other components; Assembly language Instructions, Instruction Set summary, simple programs.</p> <p><i>Design & Implementation and Filter Structures: MATLAB functions and TMS320 Implementation (Demo/Assignment only)</i></p>	9

Course Assessment Method
(CIE: 40 marks, ESE: 60 marks)

Continuous Internal Evaluation Marks (CIE):

Attendance	Assignment/ Microproject	Internal Examination-1 (Written)	Internal Examination- 2 (Written)	Total
5	15	10	10	40

End Semester Examination Marks (ESE)

In Part A, all questions need to be answered and in Part B, each student can choose any one full question out of two questions

Part A	Part B	Total
<ul style="list-style-type: none"> 2 Questions from each module. Total of 8 Questions, each carrying 3 marks <p>(8x3 =24marks)</p>	<ul style="list-style-type: none"> Each question carries 9 marks. Two questions will be given from each module, out of which 1 question should be answered. Each question can have a maximum of 3 sub divisions. <p>(4x9 = 36 marks)</p>	60

Course Outcomes (COs)

At the end of the course students should be able to:

Course Outcome		Bloom's Knowledge Level (KL)
CO1	Analyse discrete-time systems using DFT	K2
CO2	Realise IIR and FIR filters	K3
CO3	Design of IIR and FIR filters	K3
CO4	Analyse effect of word length in digital filters	K3

Note: K1- Remember, K2- Understand, K3- Apply, K4- Analyse, K5- Evaluate, K6- Create

CO-PO Mapping Table (Mapping of Course Outcomes to Program Outcomes)

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	3	2	1	2	1	3	3	3			3	2
CO2	3	3	2	2	2	3	3	3			3	2
CO3	3	3	2	2	2	3	3	3			3	2
CO4	3	3	2	2	2	3	3	3			3	2

Note: 1: Slight (Low), 2: Moderate (Medium), 3: Substantial (High), -: No Correlation

Text Books				
Sl. No	Title of the Book	Name of the Author/s	Name of the Publisher	Edition and Year

2	Discrete-Time Signal Processing	A. Oppenheim and R. Schafer	Pearson-Prentice Hall	2 nd Edition

Reference Books				
Sl. No	Title of the Book	Name of the Author/s	Name of the Publisher	Edition and Year
1	Digital Signal processing-A Practical Approach	Emmanuel C. Ifeakor, and Barrie W. Jarvis	Pearson Education	2 nd Edition
2	Digital Signal Processing	S. Salivahanan, A. Vallavaraj, and C. Gnapriya	Tata Mcgraw Hill	2 nd Edition

SEMESTER S6

CLOUD COMPUTING

Course Code	PEEET637	CIE Marks	40
Teaching Hours/Week (L: T:P: R)	3:0:0:0	ESE Marks	60
Credits	3	Exam Hours	2 Hrs 30 Min
Prerequisites (if any)	Nil	Course Type	PE - Theory

Course Objectives:

1. To enable learners to understand the concepts of cloud computing and its enabling technologies
2. Familiarize with mainstream cloud computing platforms and the services they offer.
3. To enable learners to have a basic understanding of virtualization, cloud security and cloud-based programming

SYLLABUS

Module No.	Syllabus Description	Contact Hours
1	Traditional computing- Limitations. Overview of Computing Paradigms-Grid Computing, Cluster Computing, Distributed Computing, Utility Computing, Cloud Computing. NIST reference Model-Basic terminology and concepts. Cloud characteristics, benefits and challenges, Roles and Boundaries. Cloud delivery (service) models-Infrastructure-as-a-Service (IaaS), Platform-as-a-Service(PaaS),Software-as-a-Service (SaaS), XaaS (Anything-as-a-service)- Cloud deployment models- Public cloud, Community cloud, Private cloud, Hybrid cloud.	8
2	Introduction to virtualization-Virtualizing physical computing resources, Virtual Machines (Machine virtualization), Non-virtualized v/s Virtualized machine environments. Types of VMs- Process VM v/s System VM. Emulation, Interpretation and Binary translation. Virtualization layers. Hypervisors/VMM - Types of Hypervisors. Full Virtualization, Para Virtualization, Hardware-assisted virtualization, OS level virtualization.	8

	Basics of Network Virtualization, Storage Virtualization and Desktop Virtualization.	
3	Resource provisioning techniques: Static and Dynamic Resource provisioning in cloud. Open Source Software platforms for Private Cloud : OpenStack, Eucalyptus, Open Nebula, Nimbus Popular public cloud platforms: AWS - AWS ecosystem, Compute services: EC2, Advanced compute services, Storage services: Amazon S3, Amazon EBS, Database services, other major services. Google Cloud: IaaS offerings- Compute Engine, Storage PaaS offerings-GAE. SaaS offerings. Microsoft Azure: Azure Platform Architecture, Hyper-V, Azure VM, Compute services, Storage services	11
4	Cloud programming: Parallel Computing and Programming Paradigms, Map Reduce – Hadoop Library from Apache, HDFS, Pig Latin Basics, Apache Spark Fundamentals of Cloud Security: Basic terms & concepts in security – Threat agents, Cloud security threat/risks, Trust. OS security – Virtual Machine security – Security of Virtualization – Security risk posed by Shared Images, Security risk posed by Management OS, Infrastructure security – Network Level, Host Level, Application Level, Security of the Physical systems, Identity and Access Management	10

Course Assessment Method
(CIE: 40 marks, ESE: 60 marks)

Continuous Internal Evaluation Marks (CIE):

Attendance	Assignment/ Microproject	Internal Examination-1 (Written)	Internal Examination- 2 (Written)	Total
5	15	10	10	40

End Semester Examination Marks (ESE)

In Part A, all questions need to be answered and in Part B, each student can choose any one full question out of two questions

Part A	Part B	Total
<ul style="list-style-type: none">2 Questions from each module.Total of 8 Questions, each carrying 3 marks <p>(8x3 =24marks)</p>	<ul style="list-style-type: none">Each question carries 9 marks.Two questions will be given from each module, out of which 1 question should be answered.Each question can have a maximum of 3 sub divisions. <p>(4x9 = 36 marks)</p>	60

Course Outcomes (COs)

At the end of the course students should be able to:

Course Outcome		Bloom's Knowledge Level (KL)
CO1	Explain the various cloud computing models and services	K2
CO2	Demonstrate the significance of implementing virtualization techniques	K2
CO3	Explain about the different private cloud platforms, and the services offered by popular cloud service providers	K2
CO4	Apply appropriate cloud programming methods to solve big data problems	K3
CO5	Describe the need for security mechanisms in cloud	K2

Note: K1- Remember, K2- Understand, K3- Apply, K4- Analyse, K5- Evaluate, K6- Create

CO-PO Mapping Table (Mapping of Course Outcomes to Program Outcomes)

SEMESTER 6

OPTIMIZATION TECHNIQUES

Course Code	PEEET638	CIE Marks	40
Teaching Hours/Week (L: T:P: R)	3:0:0:0	ESE Marks	60
Credits	3	Exam Hours	2 Hrs 30 Min
Prerequisites (if any)	None	Course Type	PE - Theory

Course Objectives:

1. The broad objective of the course is to introduce classical optimization, its need and techniques suitable for application in engineering problems

SYLLABUS

Module No.	Syllabus Description	Contact Hours
1	Motivation and introduction to optimization in engineering practice	1
	Properties of single variable functions and optimality criteria, Region elimination methods, Polynomial estimation methods - quadratic estimation, Bisection method, Newton raphson method, Secant method, Cubic search method	5
	Functions of several variables, optimality criteria, Direct search method, Hooke-Jeeves pattern search method, Powell's method, Gradient search methods - Cauchy's method, Newton's method	5
		11
2	Formulation of linear programming models, Graphical solution in two variables, Standard form	3
	Simplex method, Duality, Dual simplex method - Karmarkar's method	6
		9

3	Equality constrained problems - Lagrange multipliers - Kuhn Tucker conditions - Kuhn Tucker theorems - Saddlepoint conditions - Second order optimality conditions - Generalized Lagrangian multiplier method	7
	Transformation methods - Concept of penalty - penalty functions - Method of Multipliers	3
		10
4	Constrained direct search - simple direct search method - Complex method - Random search methods	4
	Linearization methods for constrained Problems - Successive linear problems - Separable programming - Method of feasible directions - Simplex extensions for linearly constrained problems - Generalized reduced gradient method	5
		9

PS: Demonstrations of various techniques can be done using softwares like Scilab / Matlab / Octave or lower end softwares like Maxima

Course Assessment Method
(CIE: 40 marks, ESE: 60 marks)

Continuous Internal Evaluation Marks (CIE):

Attendance	Assignment/ Microproject	Internal Examination-1 (Written)	Internal Examination- 2 (Written)	Total
5	15	10	10	40

End Semester Examination Marks (ESE)

In Part A, all questions need to be answered and in Part B, each student can choose any one full question out of two questions

Part A	Part B	Total
<ul style="list-style-type: none">2 Questions from each module.Total of 8 Questions, each carrying 3 marks <p>(8x3 =24marks)</p>	<ul style="list-style-type: none">Each question carries 9 marks.Two questions will be given from each module, out of which 1 question should be answered.Each question can have a maximum of 3 sub divisions. <p>(4x9 = 36 marks)</p>	60

Course Outcomes (COs)

At the end of the course students should be able to:

Course Outcome		Bloom's Knowledge Level (KL)
CO1	To evaluate the optimality criteria and methods for functions with single variable	K4
CO2	To evaluate the optimality criteria and methods for functions with several variables	K4
CO3	To understand and apply linear programming techniques for optimization	K3
CO4	To explore optimization techniques for constrained problems	K3
CO5	To explore search techniques and applications in optimization	K3

Note: K1- Remember, K2- Understand, K3- Apply, K4- Analyse, K5- Evaluate, K6- Create

CO-PO Mapping Table (Mapping of Course Outcomes to Program Outcomes)

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	3	3			2	3						2
CO2	3	3			2	3						2
CO3	3	3			2	3						2
CO4	3	3			2	3						2
CO5	3	3			2	3						2

Note: 1: Slight (Low), 2: Moderate (Medium), 3: Substantial (High), -: No Correlation

Text Books				
Sl. No	Title of the Book	Name of the Author/s	Name of the Publisher	Edition and Year
1	Engineering Optimization, Methods and Applications	A Ravindran, K M Ragsdell, G V Reklaitis	John Wiley and Sons	2006

Reference Books				
Sl. No	Title of the Book	Name of the Author/s	Name of the Publisher	Edition and Year
1	Introduction to Linear Optimization	Dimitris Bertsimas, John N Tsitsiklis	Athena Scientific	1997
2	Stories about Maxima and Minima	V M Tikhomirov	American Mathematical Society	1990

SEMESTER S6

INTRODUCTION TO CONTROL SYSTEMS

Course Code	OEEET611	CIE Marks	40
Teaching Hours/Week (L: T:P: R)	3:0:0:0	ESE Marks	60
Credits	3	Exam Hours	2 Hrs. 30 Min.
Prerequisites (if any)	None/ (Course code)	Course Type	Theory

Course Objectives:

1. To introduce various classical tools for analysis of linear control system in time and frequency domain.

SYLLABUS

Module No.	Syllabus Description	Contact Hours
1	Introduction to Control Systems, mathematical modelling and Transfer function Based Analysis Open loop and Closed loop control systems; Automatic control systems; Necessity and significance. (1 hour) <i>Modelling of LTI systems:</i> LTI Systems, Transfer function representation of differential equation in Laplace domain. Electrical, translational and rotational mechanical systems, DC servo-motor modelling. (4 hours). Block diagram representation - block diagram reduction. Signal flow graph - Mason's gain formula. (4 hours)	9
2	Performance Analysis of Control Systems: <i>Time domain analysis of control systems:</i> Impulse and Step responses of first and second order systems - Pole dominance for higher order systems. Time domain specifications. Steady state error analysis and static error constants (5 hours)	8

	Characteristic equation. Routh stability criterion. (3 hours)	
3	Root Locus Analysis and Controllers: <i>Root locus technique:</i> Construction of Root locus - stability analysis- effect of addition of poles and zeros; Effect of positive feedback systems on Root locus. (5 hours) <i>Controller design:</i> Types of controllers and their control action-proportional (P), integral (I), derivative (D), PID control. PID tuning using Ziegler-Nichols method. (3 hours)	8
4	Frequency domain analysis: <i>Bode Plot:</i> Construction, Concept of gain margin and phase margin-stability analysis. (4 hours) Frequency domain specifications - correlation between time domain and frequency domain responses (Resonant peak and resonant frequency). (2 hours) Polar plot: Gain margin and phase margin, Stability analysis. (2 hours) Nyquist stability criterion. Concept of Nichols Chart. (3 hours)	11

Course Assessment Method
(CIE: 40 marks, ESE: 60 marks)

Continuous Internal Evaluation Marks (CIE):

Attendance	Assignment/ Microproject	Internal Examination-1 (Written)	Internal Examination- 2 (Written)	Total
5	15	10	10	40

End Semester Examination Marks (ESE)

In Part A, all questions need to be answered and in Part B, each student can choose any one full question out of two questions

Part A	Part B	Total
<ul style="list-style-type: none">2 Questions from each module.Total of 8 Questions, each carrying 3 marks <p>(8x3 =24marks)</p>	<ul style="list-style-type: none">Each question carries 9 marks.Two questions will be given from each module, out of which 1 question should be answered.Each question can have a maximum of 3 sub divisions. <p>(4x9 = 36 marks)</p>	60

Course Outcomes (COs)

At the end of the course students should be able to:

Course Outcome		Bloom's Knowledge Level (KL)
CO1	To represent continuous time systems in the classical domain.	K2
CO2	Analyse the time domain responses of linear systems and predict and diagnose transient response parameters of the system for standard input functions.	K2
CO3	Analyse dynamics systems for their performance and stability using Root locus.	K3
CO4	Analyse dynamics systems for their performance and stability in frequency domain..	K3
CO5	To represent continuous time systems in the classical domain.	K2

Note: K1- Remember, K2- Understand, K3- Apply, K4- Analyse, K5- Evaluate, K6- Create

CO-PO Mapping Table (Mapping of Course Outcomes to Program Outcomes)

SEMESTER S6

ENERGY MANAGEMENT

Course Code	OEEET612	CIE Marks	40
Teaching Hours/Week (L: T:P: R)	3:0:0:0	ESE Marks	60
Credits	3	Exam Hours	2 Hrs. 30 Min.
Prerequisites (if any)	None/ (Course code)	Course Type	Theory

Course Objectives:

1. To apply energy conservation principles and management techniques to different energy conversion systems

SYLLABUS

Module No.	Syllabus Description	Contact Hours
1	<p>General aspects of energy management and energy audit: Energy Management – Definition, General principles of energy management and energy management planning</p> <p>Energy Audit: Definition, need, types and methodologies. Instruments for energy audit, Energy audit report - Power quality audit</p> <p>Energy conservation in buildings: ECBC code (basic aspects), Building Management System (BMS).</p>	9
2	<p>Energy Efficiency in Electrical Utilities: Electricity transmission and distribution system, cascade efficiency.</p> <p>Lighting: Modern energy efficient light sources, life and efficacy comparison with older light sources, energy conservation in lighting.</p> <p>Motors: Development of energy efficient motors and the present status, techniques for improving energy efficiency, necessity for load matching and selection of motors for constant and variable loads.</p> <p>Demand side Management: Introduction to DSM, benefits of DSM, different techniques of DSM.</p> <p>Power factor improvement, numerical examples.</p>	9

	Ancillary services: Introduction of ancillary services – Types of Ancillary services	
3	Energy Management in Electrical Utilities: Boilers: working principle - blow down, energy conservation opportunities in boiler. Steam: properties of steam, distribution losses, steam trapping. Identifying opportunities for energy savings in steam distribution. Furnace: General fuel economy measures, energy conservation opportunities in furnaces. HVAC system: Performance and saving opportunities in Refrigeration and Air conditioning systems. Heat Recovery Systems: Waste heat recovery system - Energy saving opportunities. Cogeneration: Types and schemes, optimal operation of cogeneration plants, combined cycle electricity generation.	9
4	Energy Economics: Economic analysis: methods, cash flow model, time value of money, evaluation of proposals, pay-back period, average rate of return method, internal rate of return method, present value method, life cycle costing approach. Computer aided Energy Management Systems (EMS).	9

Course Assessment Method
(CIE: 40 marks, ESE: 60 marks)

Continuous Internal Evaluation Marks (CIE):

Attendance	Assignment/ Microproject	Internal Examination-1 (Written)	Internal Examination- 2 (Written)	Total
5	15	10	10	40

End Semester Examination Marks (ESE)

In Part A, all questions need to be answered and in Part B, each student can choose any one full question out of two questions

Part A	Part B	Total
<ul style="list-style-type: none"> 2 Questions from each module. Total of 8 Questions, each carrying 3 marks <p>(8x3 =24marks)</p>	<ul style="list-style-type: none"> Each question carries 9 marks. Two questions will be given from each module, out of which 1 question should be answered. Each question can have a maximum of 3 sub divisions. <p>(4x9 = 36 marks)</p>	60

Course Outcomes (COs)

At the end of the course students should be able to:

Course Outcome		Bloom's Knowledge Level (KL)
CO1	Analyse the significance of energy management and auditing.	K2
CO2	Discuss the energy efficiency and management of electrical loads.	K2
CO3	Apply demand side management techniques	K2
CO4	Explain the energy management opportunities in industries.	K2
CO5	Compute the economic feasibility of the energy conservation measures	K3

Note: K1- Remember, K2- Understand, K3- Apply, K4- Analyse, K5- Evaluate, K6- Create

CO-PO Mapping Table (Mapping of Course Outcomes to Program Outcomes)

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	2					1	1		1			
CO2	2		1	1		1	1					
CO3	2		1	1		1	1					
CO4	2		1	1		1	1					
CO5	2										2	

Note: 1: Slight (Low), 2: Moderate (Medium), 3: Substantial (High), -: No Correlation

Sl. No	Title of the Book	Name of the Author/s	Name of the Publisher	Edition and Year
1	Publications of Bureau of Energy Efficiency (BEE).			
2	Energy Management and Conservation Handbook	D. Yogi Goswami, Frank Kreith,	CRC Press	2007
3	Energy management Hand Book	Wayne C. Turner	The Fairmount Press, Inc.	1997
4	Energy Management and Conservation Handbook	D. Yogi Goswami, Frank Kreith	CRC Press	2007
5	Industrial energy conservation	Charles M. Gottschalk	John Wiley & Sons	1996

SEMESTER S6
RENEWABLE ENERGY SYSTEMS

Course Code	OEEET613	CIE Marks	40
Teaching Hours/Week (L: T:P: R)	3:0:0:0	ESE Marks	60
Credits	3	Exam Hours	2 Hrs. 30 Min.
Prerequisites (if any)	NIL	Course Type	Theory

Course Objectives:

1. To understand energy scenario, energy sources and their utilization
2. To explore society's present needs and future energy demands
3. To study the principles of renewable energy conversion systems
4. To be exposed to energy conservation methods

SYLLABUS

Module No.	Syllabus Description	Contact Hours
1	<p>Introduction: Principles of renewable energy; energy and sustainable development, fundamentals and social implications. Worldwide renewable energy availability, renewable energy availability in India, types of renewable energy.</p> <p>Wind Energy: Properties of wind, availability of wind energy in India, wind velocity and power from wind (numerical problems); major problems associated with wind power, Basic components of wind energy conversion system (WECS); Classification of WECS- Horizontal axis- single, double and multi-blade system. Vertical axis - Savonius and Darrieus types.</p>	9
2	<p>Solar Energy: Fundamentals; Solar Radiation; Estimation of solar radiation on horizontal and inclined surfaces; Solar radiation Measurements - Pyrheliometers, Pyranometer, Sunshine Recorder. Solar Thermal systems: concentrating and non-concentrating collectors - Flat plate collectors; Solar tower electric power plant. Photovoltaic system for electric power generation</p>	9

	– Classification of PV system - Principle of Solar cell, advantages, disadvantages and applications of solar photovoltaic system.	
3	<p>Biomass Energy: Introduction; Principle of biomass energy generation - Biofuels; Biomass Resources; Biomass conversion technologies-fixed dome type biogas plant; Urban waste to energy conversion; Biomass gasification (Downdraft).</p> <p>Tidal Power: Tides and waves as energy suppliers and their mechanics; fundamental characteristics of tidal power, classification of tidal power plants - harnessing tidal energy, advantages and limitations.</p>	9
4	<p>Ocean Thermal Energy Conversion: Principle of working, classification, OTEC power stations in the world, environmental impacts associated with OTEC.</p> <p>Introduction to geothermal energy</p> <p>Green Energy: Introduction, Fuel cells: Classification of fuel cells – Hydrogen energy; Operating principles, Zero-energy Concepts. Benefits of hydrogen energy, hydrogen production technologies (electrolysis method only), hydrogen energy storage, applications of hydrogen energy, problem associated with hydrogen energy.</p>	9

Course Assessment Method
(CIE: 40 marks, ESE: 60 marks)

Continuous Internal Evaluation Marks (CIE):

Attendance	Assignment/ Microproject	Internal Examination-1 (Written)	Internal Examination- 2 (Written)	Total
5	15	10	10	40

End Semester Examination Marks (ESE)

In Part A, all questions need to be answered and in Part B, each student can choose any one full question out of two questions

Part A	Part B	Total
<ul style="list-style-type: none">• 2 Questions from each module.• Total of 8 Questions, each carrying 3 marks <p>(8x3 =24marks)</p>	<ul style="list-style-type: none">• Each question carries 9 marks.• Two questions will be given from each module, out of which 1 question should be answered.• Each question can have a maximum of 3 sub divisions. <p>(4x9 = 36 marks)</p>	60

Course Outcomes (COs)

At the end of the course students should be able to:

Course Outcome		Bloom's Knowledge Level (KL)
CO1	Describe the environmental aspects of renewable energy resources in comparison with various conventional energy systems, their prospects and limitations.	K1
CO2	Understand the concepts of wind energy.	K1
CO3	Describe the use of solar energy and the various components used in the energy production with respect to applications like-heating, cooling, desalination, power generation.	K2
CO4	Understand the concept of biomass energy resources and conversion principles of tidal energy.	K2
CO5	Acquire the basic knowledge of ocean thermal energy conversion. Understand the principle of green energy and hydrogen energy.	K1

Note: K1- Remember, K2- Understand, K3- Apply, K4- Analyse, K5- Evaluate, K6- Create

CO-PO Mapping Table (Mapping of Course Outcomes to Program Outcomes)

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	3	3										2
CO2	3	3										2
CO3	3	3										2
CO4	3	3										2
CO5	3	3										2

Note: 1: Slight (Low), 2: Moderate (Medium), 3: Substantial (High), -: No Correlation

Text Books				
Sl. No	Title of the Book	Name of the Author/s	Name of the Publisher	Edition and Year
1	Non-conventional energy sources	G. D. Rai	Khanna	4 th edition 2023
2	Renewable energy systems	Thomas E. Kissell, David M. Buchla, Thomas L. Floyd,	Pearson	2017
3	Non-Conventional Energy Resources	Sawhney G. S.	PHI Learning	2012
4	Renewable energy systems	Thomas E. Kissell, David M. Buchla, Thomas L. Floyd,	Pearson	Pearson 2017

SEMESTER S6
CONTROL SYSTEM LAB
(EE Branch)

Course Code	PCEEL607	CIE Marks	50
Teaching Hours/Week (L: T:P: R)	0:0:3:0	ESE Marks	50
Credits	2	Exam Hours	2 Hrs. 30 Min.
Prerequisites (if any)	PCEET302/ PCEET601	Course Type	Lab

Course Objectives:

1. To make the students learn how to determine the parameters experimentally and model the given system.
2. To make the students learn the experimental determination of responses of dynamic systems and analyse its behaviour.
3. To make the students learn the different analysis and controller design tools using appropriate simulation software

Expt. No.	Experiments
1	Transfer Function and State Space Modelling of Armature and Field Controlled DC Motor. Objective: Obtain the transfer function and state space model of the armature and field-controlled DC motor by experiment.
2	Transfer function of A.C. Servo motor. Objective: Obtain the transfer function of AC Servo motor by experiment.
3	Synchro Transmitter and Receiver for open loop position control. Objective: <ol style="list-style-type: none"> a) Plot the characteristics of synchro. Error study of the synchro transmitter and receiver pair as a simple open loop position control in Direct mode and Differential mode.

4	<p>Step response and frequency response of a second order system realised using passive components</p> <p>Objective: Design a second order (RLC network) system to analyse the following:</p> <p>a. The effect of damping factor ($0 < \xi < 1$, $\xi = 1$, $\xi > 1$) for a step input .</p> <p>b. Verification of the delay time, rise time, peak overshoot and settling time with the theoretical values for $0 < \xi < 1$.</p> <p>c. Effect of damping ratio on frequency response.</p> <p>d. Verification of resonant peak, resonant frequency and bandwidth for $0 < \xi < 1$.</p>
5	<p>Realisation of lead compensator.</p> <p>Objective: Design, set up and analyse the gain and phase plots of a lead compensator by hardware experimentation using i) passive elements and ii) active components</p>
6	<p>Realisation of lag compensator.</p> <p>Objective: Design, set up and analyse the gain and phase plots of a lag compensator by hardware experimentation using:</p> <p>i) passive elements and ii) active components.</p>
7	<p>Performance of a typical process control system</p> <p>Objective: Study of performance characteristics and response analysis of a typical temperature/ Flow/ Level control system.</p>
8	<p>System Identification and Modeling</p> <p>Objective: Obtain the frequency response and identify the transfer function of the given system(black box),</p>

9	<p>Step response and frequency response of a second order system using simulation</p> <p>Objective: To analyse the response of the second order system (in experiment 1) using (MATLAB/SCILAB/similar softwares)</p> <ol style="list-style-type: none"> The effect of damping factor ($0 < \xi < 1$, $\xi = 1$, $\xi > 1$) for a step input . Comparison of the delay time, rise time, peak overshoot and settling time with the experimental values for $0 < \xi < 1$. The effect of damping ratio on frequency response. Comparison of resonant peak, resonant frequency and bandwidth with the experimental values for $0 < \xi < 1$.
10	<p>Performance Analysis using Root-Locus and frequency Response Methods in MATLAB/SCILAB/similar softwares.</p> <p>Objective:</p> <ol style="list-style-type: none"> Plot the i) root locus ii) Bode plot and iii) Nyquist plot and iv) Nichols chart for the given transfer functions and analyse the following: <p>Root Locus:</p> <ol style="list-style-type: none"> Determine the critical gain, frequency of oscillation at critical gain. The effect of gain, K on the stability. Determine the gain corresponding to a given damping ratio and obtain the step response of the system for the corresponding gain. The effect of the addition of poles and zeros on the given system. <p>Frequency response:</p> <ol style="list-style-type: none"> Determination of Gain Margin and Phase Margin (stable and unstable, minimum/non-minimum phase system)

	<p>f. The effect of controller gain K on the stability margin</p> <p>g. The effect of the addition of poles and zeros on the given system (especially the poles at origin).</p> <p>h. Determine the stability of a given minimum and non-minimum phase system using Nyquist stability criterion.</p> <p>i. Determine the bandwidth of a given system from open loop frequency response using Nichols chart.</p>
11	<p>Design of lag, lead and lag-lead compensator using root locus.</p> <p>Objective: Design a suitable compensator for the given system to satisfy the given time domain specifications using MATLAB/SCILAB/ similar software.</p>
12	<p>Design of lag, lead and lag-lead compensator using frequency response.</p> <p>Objective: Design a suitable compensator for the given system to satisfy the given frequency domain specifications using MATLAB/SCILAB/ similar software.</p>
13	<p>State Space Model, Analysis and Controller Design</p> <p>Objective: Analyse the given system (eg. DC Servo motor modelled in experiment no.1 for speed control) in state space and design a controller by pole-placement technique using MATLAB/SCILAB/ similar software.</p> <p>a. Determine the open loop stability, controllability and observability</p> <p>b. Design a state-feedback controller by pole-placement technique for a given specification.</p>
14	<p>PID Controller Design</p> <p>Objective: Design a PID controller for the given system (eg. DC Servo motor modelled in experiment no. 1 for position control) using SIMULINK/ MATLAB based tool boxes.</p> <p>a. Design of P, PI, PD, PID controller using the Ziegler-Nichols method.</p> <p>b. Design of a suitable controller (P/PI/PD/PID) to meet the desired specifications using root locus/frequency response.</p>

Note: 1. A minimum of **12 experiments** are compulsory.
2. Experiment No. **11, 12, and 13** are mandatory.

Course Assessment Method
(CIE: 50 marks, ESE: 50 marks)

Continuous Internal Evaluation Marks (CIE):

Attendance	Preparation/Pre-Lab Work experiments, Viva and Timely completion of Lab Reports / Record (Continuous Assessment)	Internal Examination	Total
5	25	20	50

End Semester Examination Marks (ESE):

Procedure/ Preparatory work/Design/ Algorithm	Conduct of experiment/ Execution of work/ troubleshooting/ Programming	Result with valid inference/ Quality of Output	Viva voce	Record	Total
10	15	10	10	5	50

- *Submission of Record: Students shall be allowed for the end semester examination only upon submitting the duly certified record.*
- *Endorsement by External Examiner: The external examiner shall endorse the record*

Course Outcomes (COs)

At the end of the course students should be able to:

Course Outcome		Bloom's Knowledge Level (KL)
CO1	Identify and conduct suitable experiments to determine the parameters to model a physical system.	K3
CO2	Conduct suitable experiments and determine the performance specifications.	K3
CO3	Analyse a linear continuous time system model using simulation tools.	K3
CO4	Design suitable controllers/compensators to meet the performance requirements using simulation tools.	K5

Note: K1- Remember, K2- Understand, K3- Apply, K4- Analyse, K5- Evaluate, K6- Create

CO- PO Mapping (Mapping of Course Outcomes with Program Outcomes)

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12

Continuous Assessment (25 Marks)

1. Preparation and Pre-Lab Work (7 Marks)

- Pre-Lab Assignments: Assessment of pre-lab assignments or quizzes that test understanding of the upcoming experiment.
- Understanding of Theory: Evaluation based on students' preparation and understanding of the theoretical background related to the experiments.

2. Conduct of Experiments (7 Marks)

- Procedure and Execution: Adherence to correct procedures, accurate execution of experiments, and following safety protocols.
- Skill Proficiency: Proficiency in handling equipment, accuracy in observations, and troubleshooting skills during the experiments.
- Teamwork: Collaboration and participation in group experiments.

3. Lab Reports and Record Keeping (6 Marks)

- Quality of Reports: Clarity, completeness and accuracy of lab reports. Proper documentation of experiments, data analysis and conclusions.
- Timely Submission: Adhering to deadlines for submitting lab reports/rough record and maintaining a well-organized fair record.

4. Viva Voce (5 Marks)

- Oral Examination: Ability to explain the experiment, results and underlying principles during a viva voce session.

Final Marks Averaging: The final marks for preparation, conduct of experiments, viva, and record are the average of all the specified experiments in the syllabus.

Evaluation Pattern for End Semester Examination (50 Marks)

1. Procedure/Preliminary Work/Design/Algorithm (10 Marks)

- Procedure Understanding and Description: Clarity in explaining the procedure and understanding each step involved.

- Preliminary Work and Planning: Thoroughness in planning and organizing materials/equipment.
- Algorithm Development: Correctness and efficiency of the algorithm related to the experiment.
- Creativity and logic in algorithm or experimental design.

2. Conduct of Experiment/Execution of Work/Programming (15 Marks)

- Setup and Execution: Proper setup and accurate execution of the experiment or programming task.

3. Result with Valid Inference/Quality of Output (10 Marks)

- Accuracy of Results: Precision and correctness of the obtained results.
- Analysis and Interpretation: Validity of inferences drawn from the experiment or quality of program output.

4. Viva Voce (10 Marks)

- Ability to explain the experiment, procedure results and answer related questions
- Proficiency in answering questions related to theoretical and practical aspects of the subject.

5. Record (5 Marks)

- Completeness, clarity, and accuracy of the lab record submitted

SEMESTER S6
POWER SYSTEM LAB

Course Code	PCEEL609	CIE Marks	50
Teaching Hours/Week (L: T:P: R)	0:0:2:0	ESE Marks	50
Credits	1	Exam Hours	2 Hrs. 30 Min.
Prerequisites (if any)	PCEET501	Course Type	Lab

Course Objectives:

1. To encourage students learn through analytical problem solving and practical implementation.
2. To motivate the students for self-learning
3. To make them ready for practical implementation of the knowledge that they have gained from theory.

Expt. No.	Experiments
	Software
1	Y-Bus formulation: Aim: (i) To formulate the bus admittance matrix of the given power system from its single line diagram, using basic MATLAB programming. (ii) To incorporate changes in basic topology.
2	Transmission Line Modelling: ABCD constants Aim: (i) To model the given medium transmission line using nominal T and nominal pi representation and to derive the ABCD constants using basic MATLAB programming.
3	Load Flow Analysis – Gauss-Siedel Method, Newton - Raphson Method, Fast Decoupled Method – Aim: (i) To conduct load flow analysis using Gauss-Siedel method, Newton-Raphson method, Fast Decoupled method and to study the effect of change in load/generation schedule.
4	Load Flow Analysis – Gauss-Siedel Method, Newton - Raphson Method, Fast Decoupled Method Aim: (i) To conduct load flow analysis using Gauss-Siedel method, Newton-Raphson method, Fast Decoupled method and to study the effect of change in real power/reactive power limits.
5	Short Circuit Analysis – Symmetrical Faults and Unsymmetrical Faults Aim: (i) To conduct short circuit analysis for symmetrical and unsymmetrical faults.
6	Transient Stability Analysis Aim: To conduct transient stability analysis of a given system and plot suitable graphs using MATLAB Simulink or dedicated software (if available)

7	Automatic Generation Control – Single Area, Two Area Aim: To implement Automatic Generation Control in MATLAB Simulink.
8	Automatic Voltage Regulator Aim: To implement Automatic Voltage Regulator in MATLAB Simulink.
9	Ferranti Effect and Reactive Power Compensation Aim: (i) To exhibit Ferranti effect in a lightly loaded long transmission line in MATLAB Simulink and to show the effect of reactive power compensation. (ii) To calculate Surge Impedance Loading of the line
10	Plot the IV characteristics of a PV module and determine Maximum Power Point Aim: To plot the IV characteristics of a PV module in MATLAB Simulink and determine the Maximum Power Point
	Hardware
11	High Voltage Testing – Power frequency /impulse
12	High Voltage Testing - DC
13	Relay Testing – Over current Relay / Earth Fault (Electromechanical / Static /Numerical) Aim: To draw the characteristics of the given relay.
14	Relay Testing –Voltage relay/ Impedance Relay (Electromechanical/Static/Numerical) Aim: To draw the characteristics of the given relay.
15	Insulation Testing – LT & HT Cable Aim: To determine the insulation resistance of the given LT & HT cable.
16	Testing of CT and PT Aim: To conduct ratio test of the given CT and PT.
17	Testing of transformer oil Aim: To determine the dielectric strength of the given sample of transformer oil.
18	Testing of dielectric strength of solid insulating materials Aim: To determine the dielectric strength of the solid insulating material given.
19	Testing of dielectric strength of air Aim: To determine the dielectric strength of air.
20	Power factor improvement Aim: To calculate the power factor of the given RL series circuit (transmission line) and design the capacitance required to improve the power factor to the desired value.

Course Assessment Method
(CIE: 50 marks, ESE: 50 marks)

Continuous Internal Evaluation Marks (CIE):

Attendance	Preparation/Pre-Lab Work experiments, Viva and Timely completion of Lab Reports / Record (Continuous Assessment)	Internal Examination	Total
